# MPI and PETSc

A brief tutorial

Praveen Chandrashekar <a href="https://cpraveen.github.io">https://cpraveen.github.io</a>

#### MPI: Hello, World!

- https://github.com/cpraveen/parallel/tree/master/mpi
- Compile the code
   mpif77 -o hello hello.f
   mpif90 -o hello hello.f
   mpicc -o hello hello.c
- If you have a 4-core cpu, run like this
   mpirun -np 4 hello
- mpicc, etc. are just wrappers; see the actual command (this works with openmpi only)
   mpicc --showme

## integrate1: blocking send/recv

• Compute using R ranks; partition the domain

$$[a,b] = \bigcup_{n=0}^{K} [a_n, b_n]$$

and compute as

$$I = \int_{a}^{b} \cos(x)dx = \sum_{n=1}^{R} \int_{a_n}^{b_n} \cos(x)dx = \sum_{n=1}^{R} \left[ \sin(b_n) - \sin(a_n) \right]$$

- Compile
   mpif90 -o integrate1 integrate1.f90
   mpicc -o integrate1 integrate1.c
- Runmpirun -np 4 integrate1

#### PETSc resources

- http://www.petsc.org
- Manual pages
- Notes by Matt Knepley
- Book by <u>Ed Bueler: PETSc for Partial Differential Equations:</u> <u>Numerical Solutions in C and Python</u> Codes from the book: <a href="https://github.com/bueler/p4pdes">https://github.com/bueler/p4pdes</a>
- PETSc has many examples: see
   <a href="http://cpraveen.github.io/teaching/petsc.html">http://cpraveen.github.io/teaching/petsc.html</a>
   and
   <a href="https://petsc.org/release/tutorials">https://petsc.org/release/tutorials</a>

### parallel/petsc/hello.c

```
make hello
./hello -help intro
./hello -help
./hello
mpirun -n 4 ./hello
mpiexec -n 4 ./hello
```

### Variable types

- <u>PetscInt</u>: usually 32-bit integer, can be configured for 64-bit integer while compiling Petsc, which is needed for large meshes
- <u>PetscErrorCode</u>: integer return type from Petsc functions
- <u>PetscMPIInt</u>: use this to pass to MPI functions, e.g., to get rank, size, etc.
- PetscReal: usually real double
- <u>PetscScalar</u>: usually real double, can be complex double also. It is used for the scalar field in a vector space and for entries of vectors and matrices.

### Printing

- PetscPrintf: similar to printf in C, not collective
- PetscPrintf(PETSC\_COMM\_WORLD, format, variables) prints only on rank=0 process
- PetscPrintf(PETSC\_COMM\_SELF, format, variables)
   prints on every rank
- By default PETSC\_COMM\_WORLD = MPI\_COMM\_WORLD PETSC\_COMM\_SELF = MPI\_COMM\_SELF (always)
- PetscFPrintf: Prints to a file

## p4pdes/c/ch1/e.c

• Compute the value of e in parallel

$$e = \sum_{n=0}^{\infty} \frac{1}{n!}$$

- Each rank computes one term in the sum
- If total ranks = r, we compute

$$e \approx \sum_{n=0}^{r-1} \frac{1}{n!} = 1 + 1 + \frac{1}{2!} + \dots + \frac{1}{(r-1)!}$$

- rank = n computes  $\frac{1}{n!}$
- Accuracy increases as number of ranks increase

## Creating DMDA

- DMDACreate1D
- DMDACreate2D
- DMDACreate3D
- DMBoundaryType
- DMDAStencilType

#### **DMDA** info

- <u>DMDAGetInfo</u>: get full mesh sizes
- <u>DMDAGetCorners</u>: get range of locally owned grid
- <u>DMDAGetGhostCorners</u>: get range of local grid including ghost points
- All of above info can be obtained together using: <a href="https://doi.org/10.1007/journal.com/">DMDALocalInfo</a> and <a href="https://doi.org/10.1007/journal.com/">DMDAGetLocalInfo</a>

#### Vectors

- Global vector: distributed vector without ghost values
- Local vector: has ghost values
- DMCreateGlobalVector and DMGetGlobalVector
- <u>DMCreateLocalVector</u> and <u>DMGetLocalVector</u>
- <u>VecSetValues</u>
- VecAssemblyBegin and VecAssemblyEnd

#### Arrays from Vectors

- Useful for working with Cartesian/structured grids
- VecGetArray and VecRestoreArray
- VecGetArrayRead and VecRestoreArrayRead
- VecPlaceArray
- <u>DMDAVecGetArrayDOF</u> and <u>DMDAVecRestoreArrayDOF</u>
- DMDAVecGetArrayDOFRead and DMDAVecRestoreArrayDOFRead

### cfdlab/petsc

- convect1d
- burger1d
- convect2d
- euler2d/ssprk.c
- euler2d/ts.c
- euler2d/fdweno.c

#### BVP: Tutorial examples

- ex2: 2-D Poisson equation (FV, BC is not clear)
   https://petsc.org/release/src/ksp/ksp/tutorials/ex2.c.html
- ex46: 2-D Poisson equation, using DM (FV, BC is not clear) <a href="https://petsc.org/release/src/ksp/ksp/tutorials/ex46.c.html">https://petsc.org/release/src/ksp/ksp/tutorials/ex46.c.html</a>
- ex45: 3-D Poisson using multigrid (FD, BC is also in matrix, matrix is not symmetric)
   https://petsc.org/release/src/ksp/ksp/tutorials/ex45.c.html
- ex50: Poisson with Neumann bc (FV)
   https://petsc.org/release/src/ksp/ksp/tutorials/ex50.c.html
- ex29: Poisson with Dirichlet or Neumann bc (FD)
   https://petsc.org/release/src/ksp/ksp/tutorials/ex29.c.html
- ex32: Poisson with Neumann bc (FV)
   https://petsc.org/release/src/ksp/ksp/tutorials/ex32.c.html
